(a) phase of the run, from the plan matched to the holds

(b) measured position, 1 kHz (2,653,449 samples) — measurement stays within 2.003–120.692 mm

(c) peak speed of each move between dwells — median 2.10 mm/s; AquadB ceiling 8.333 mm/s

No board log accompanied this capture: the datum (-95.6990 mm) and every window edge come from the trace, with the plan supplying only the order of the stops.
