Raw chirp measurement — tempTvalm — complete recording

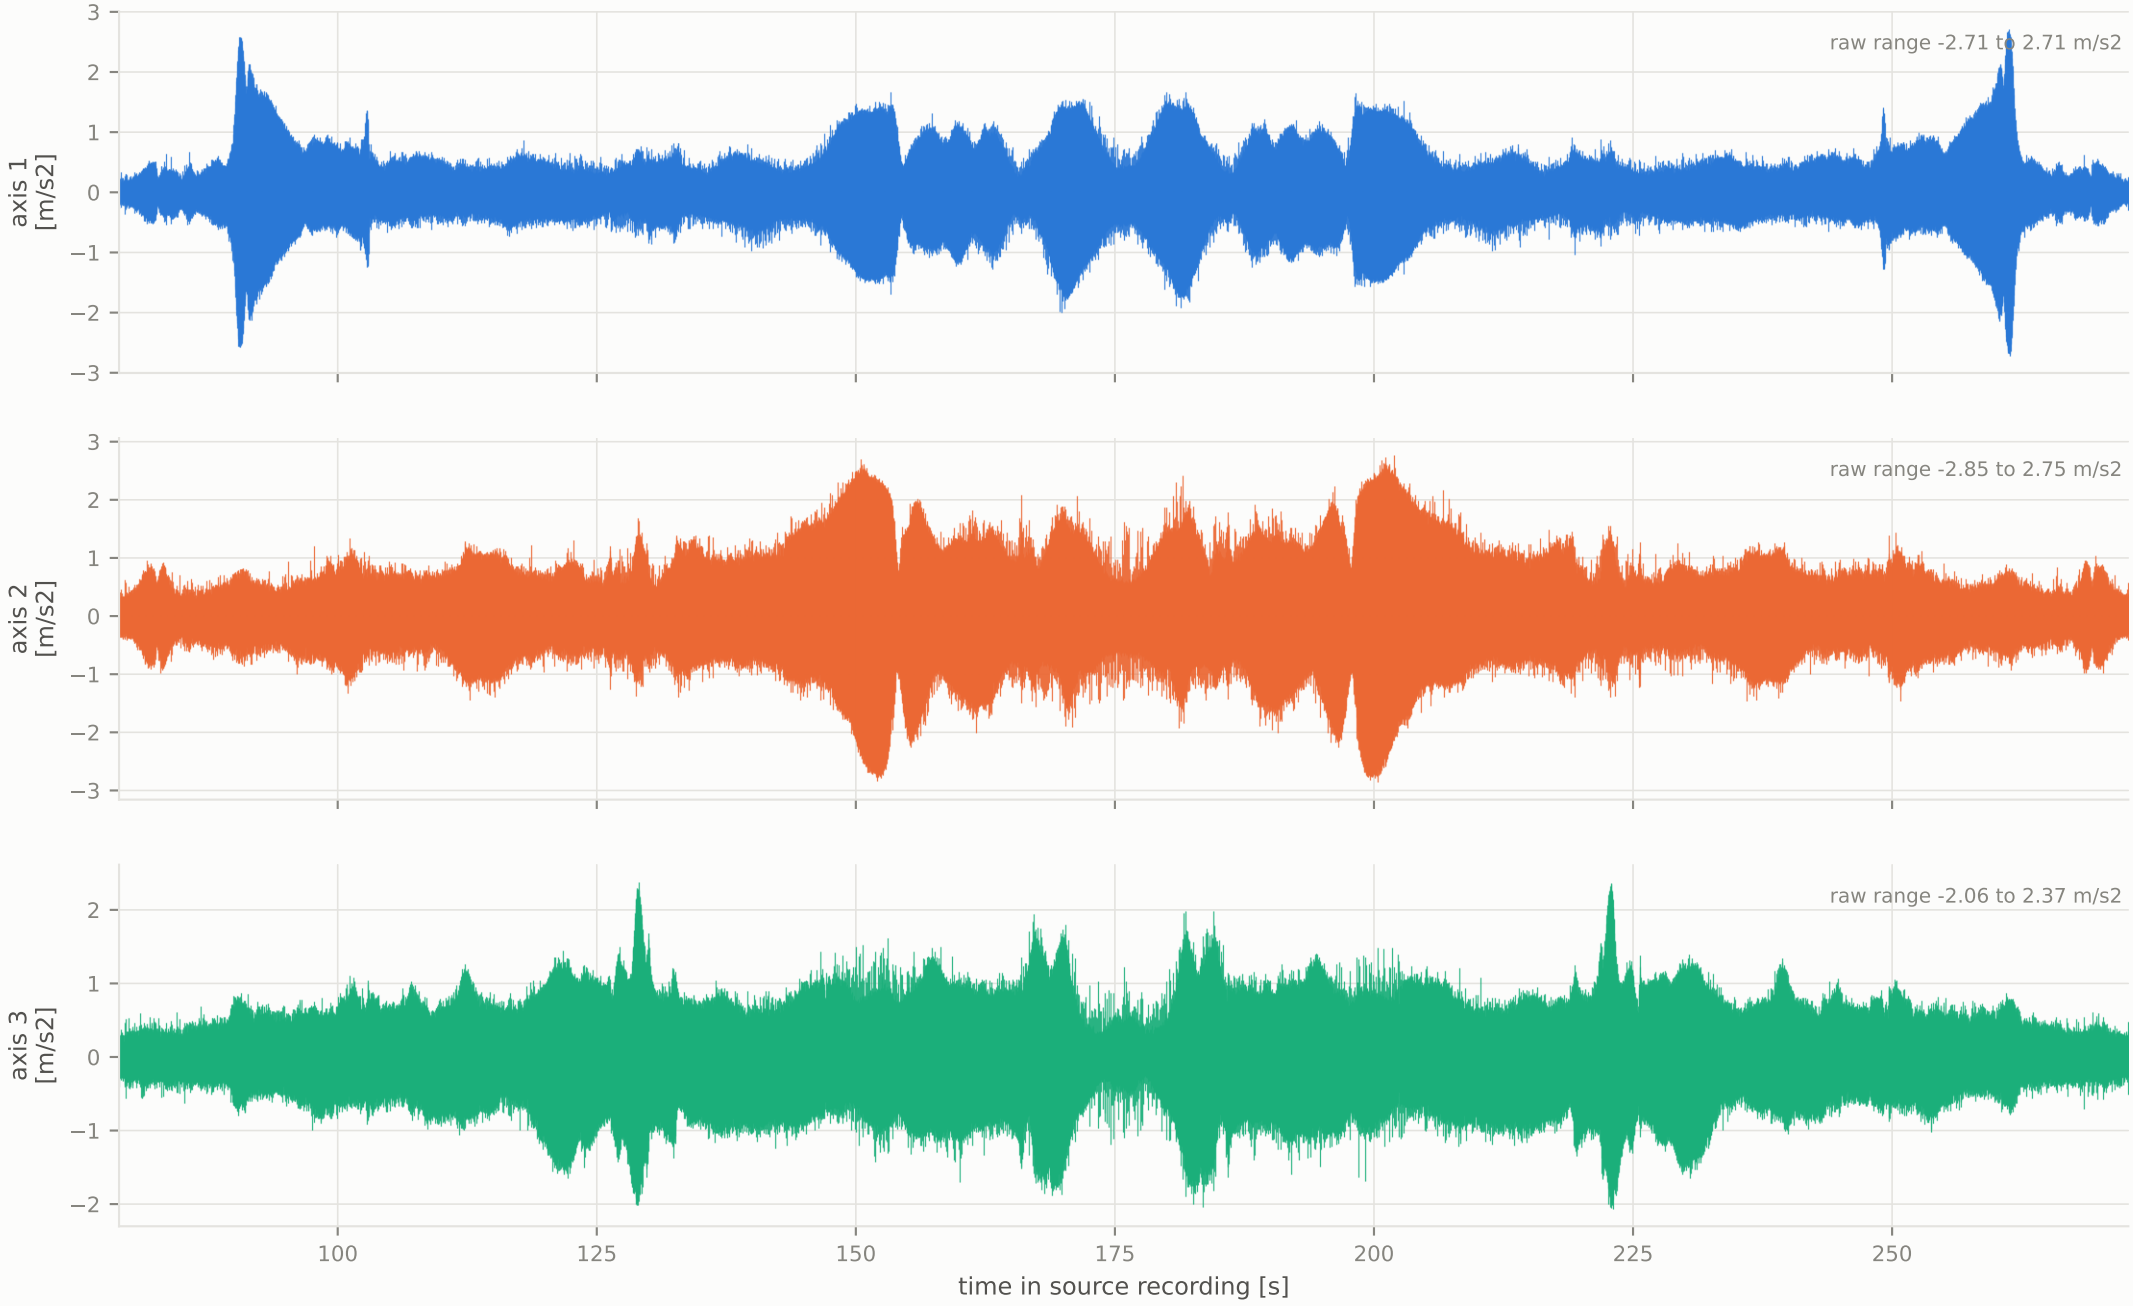

5,566,069 original samples · 19,999.94 samples/s · 0.000–278.304 s in source recording

Unprocessed acceleration. Each vertical stroke is the exact raw minimum-to-maximum range in one display bin; no samples are averaged or filtered.

Raw chirp measurement — tempTvalm — run 1 (HIGH sweep)

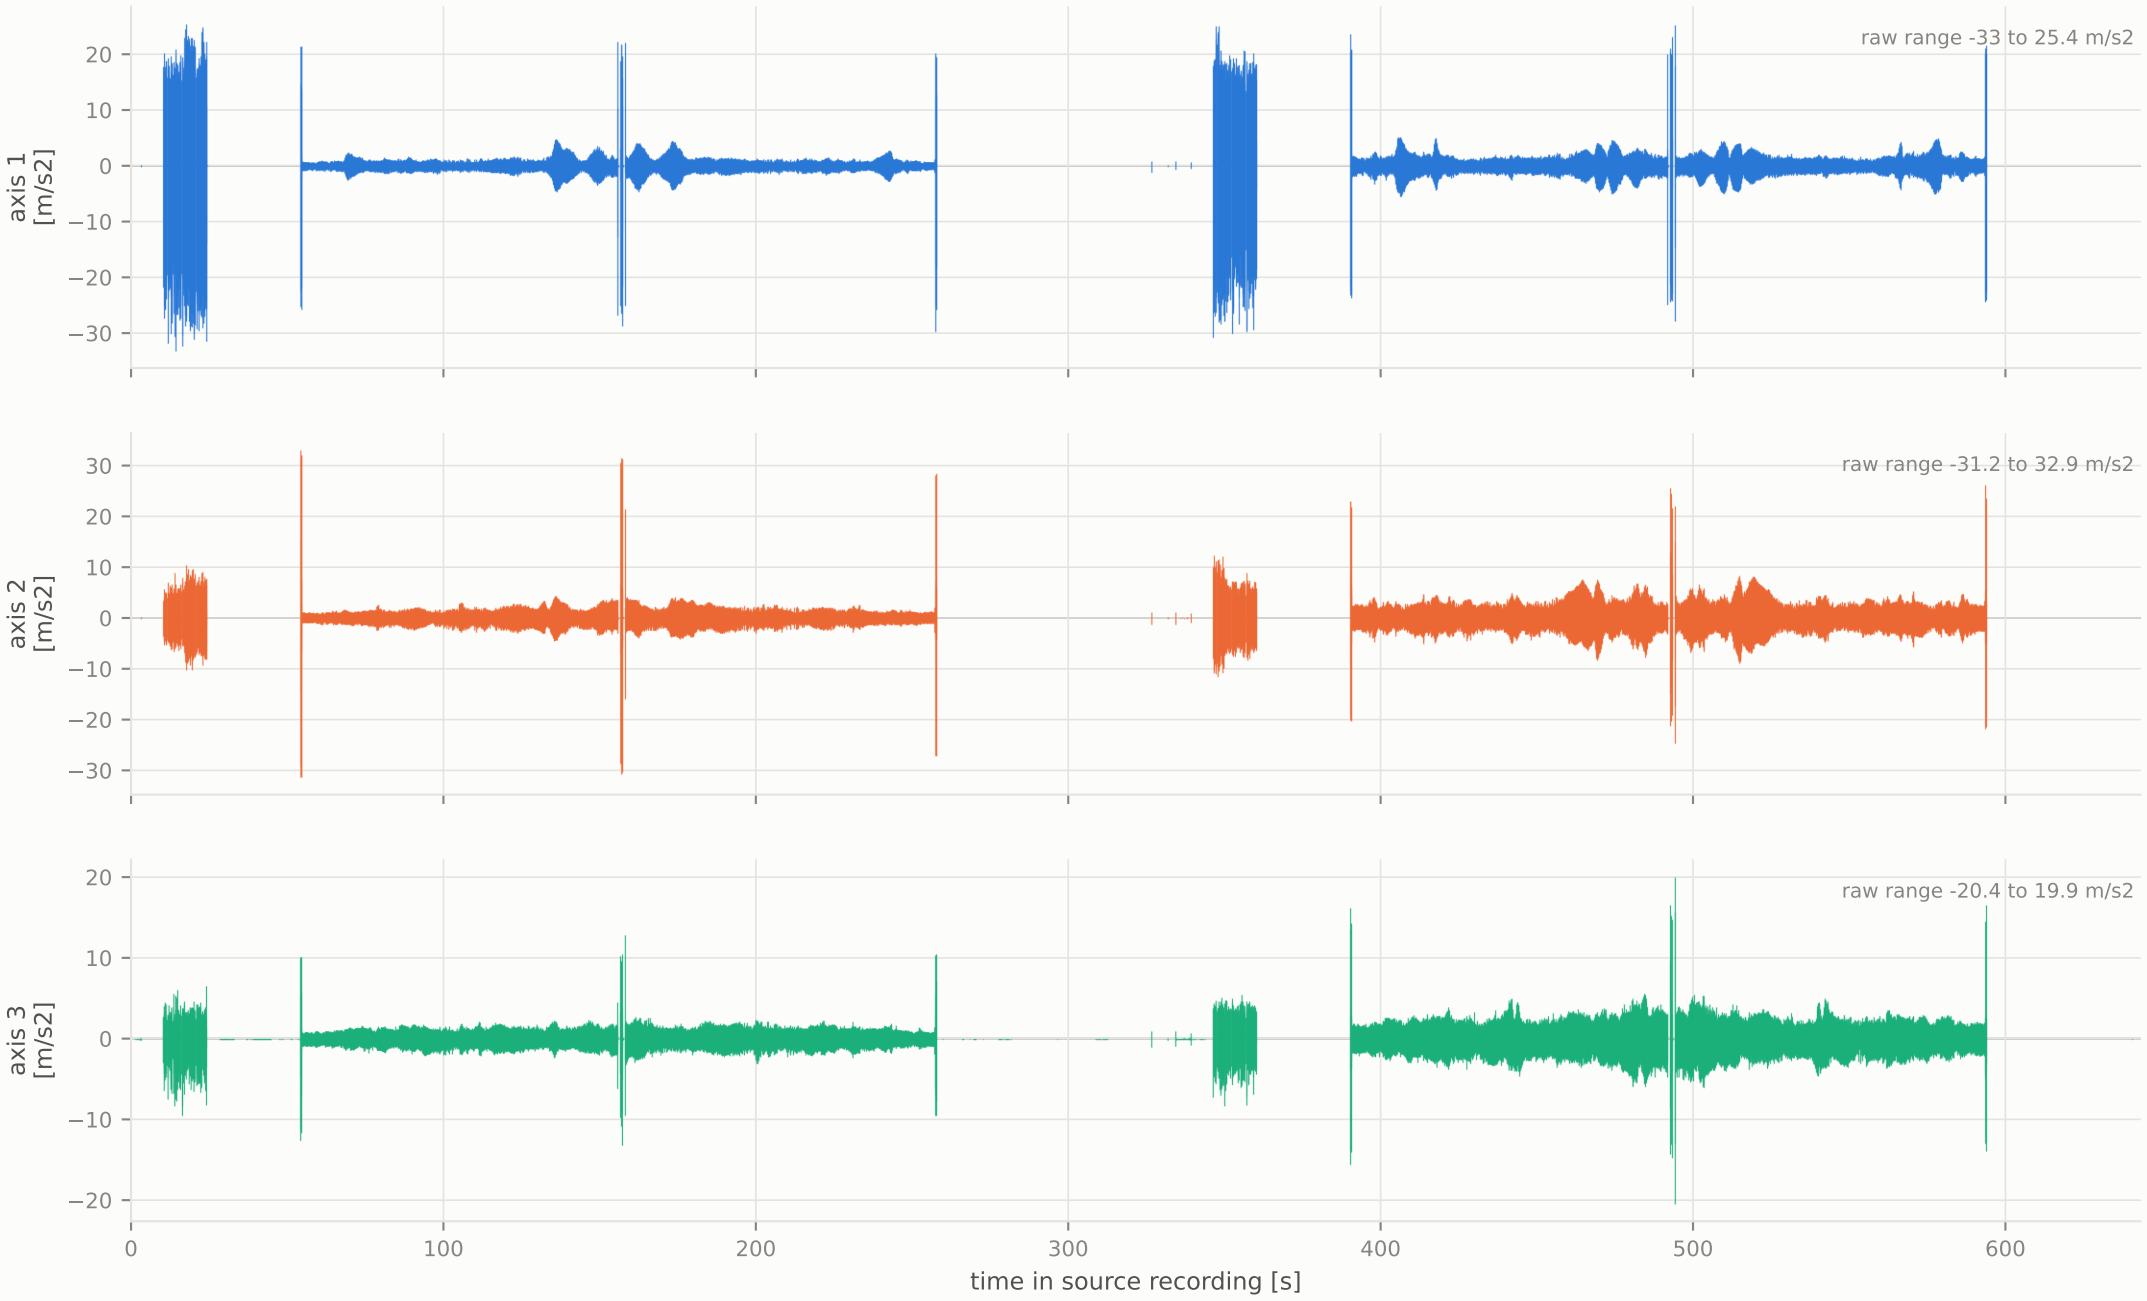

3,877,889 original samples · 19,999.94 samples/s · 78.899–272.794 s in source recording

Unprocessed acceleration. Each vertical stroke is the exact raw minimum-to-maximum range in one display bin; no samples are averaged or filtered.

Raw chirp measurement — tempTvalm2 — complete recording

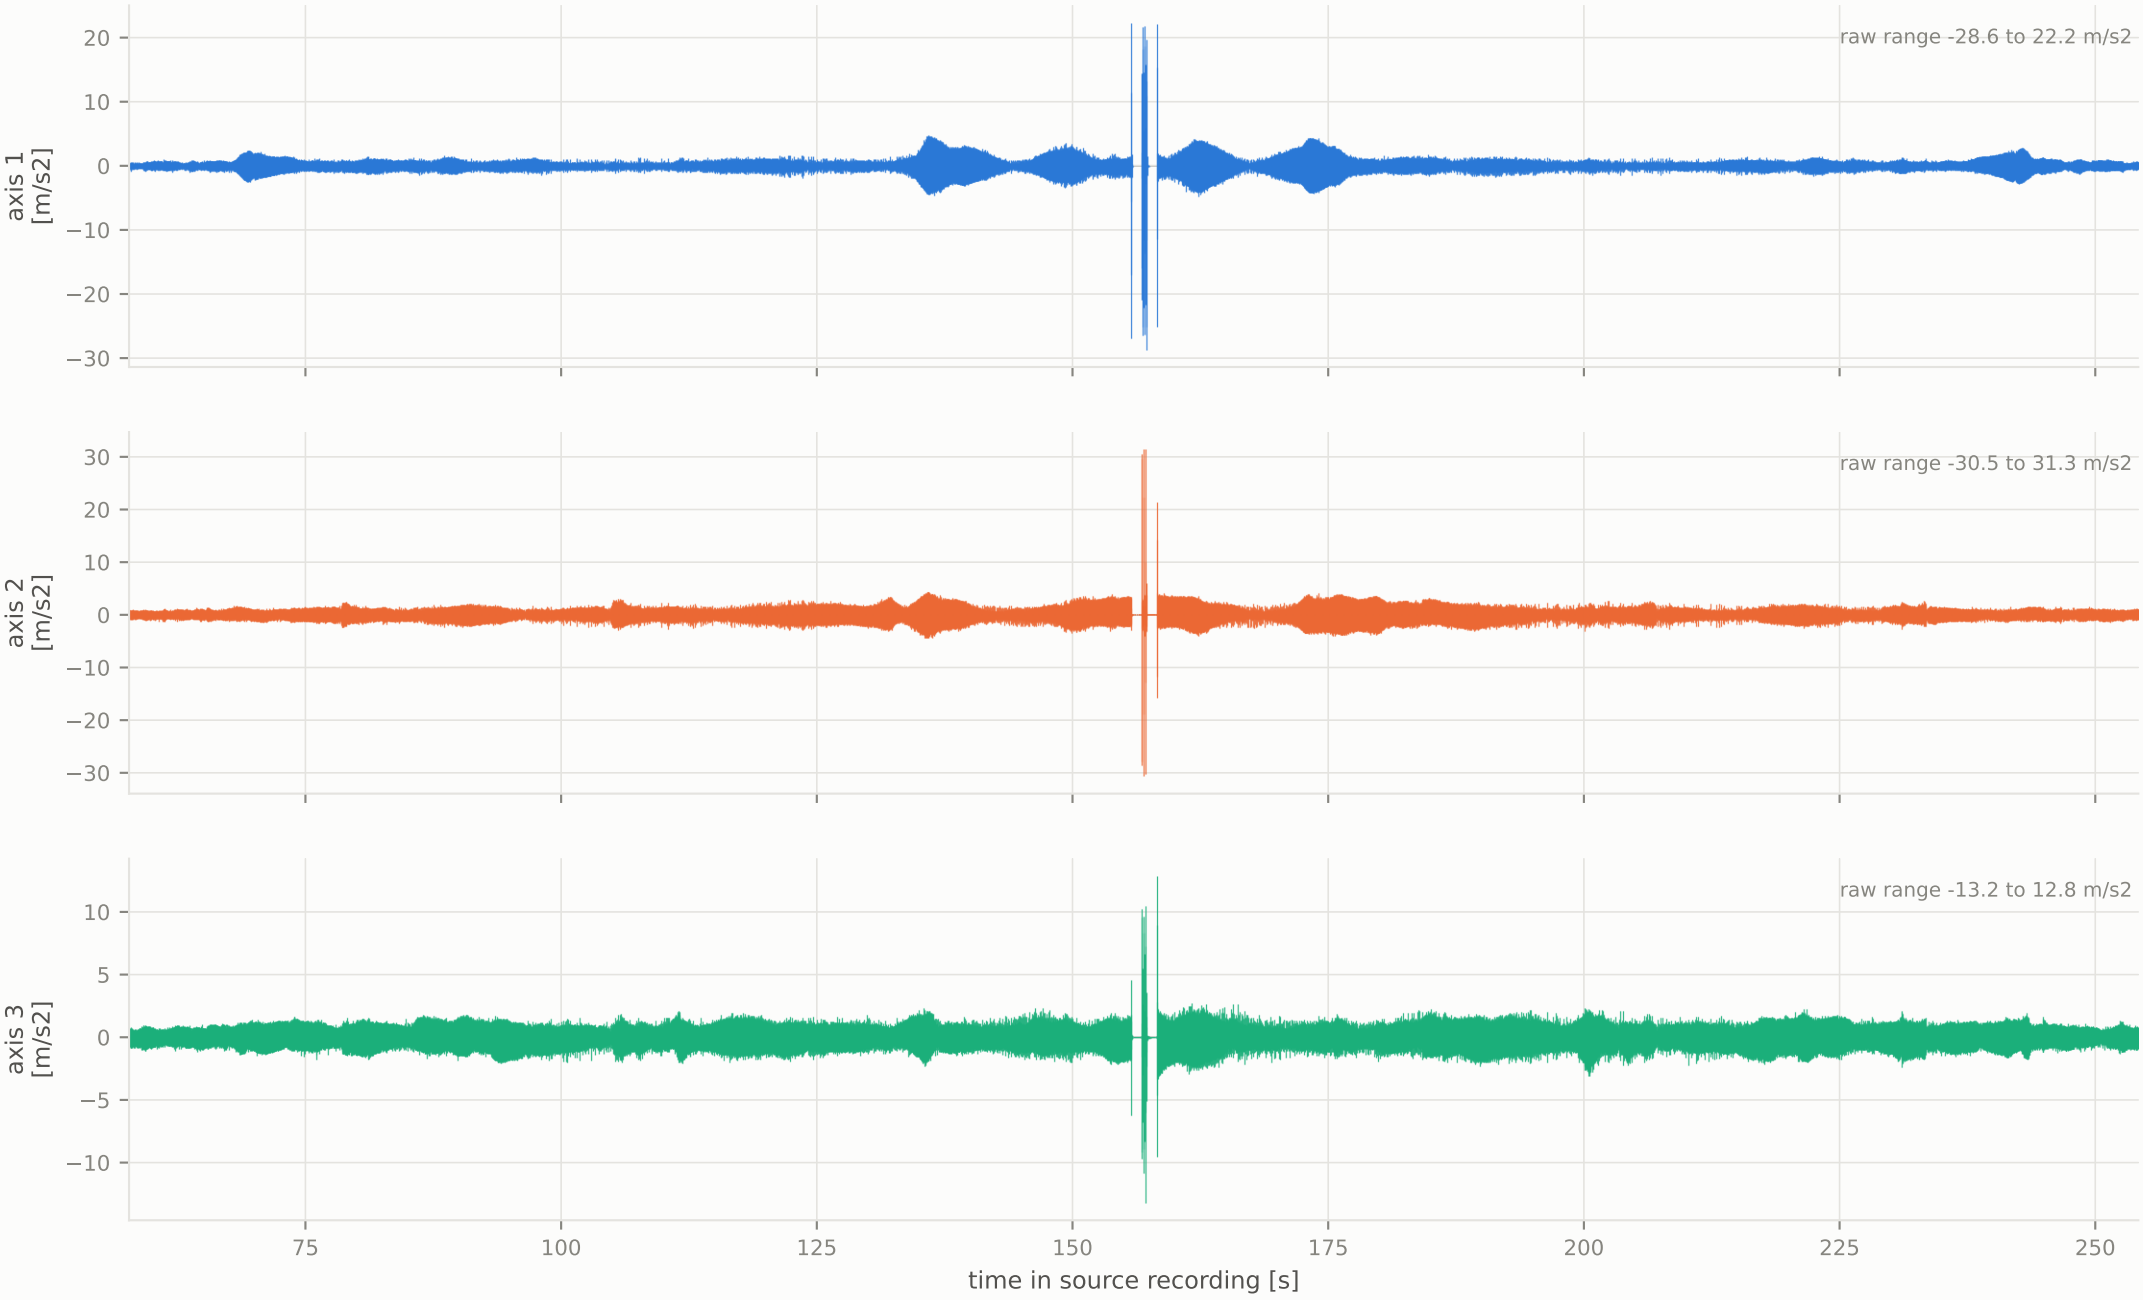

12,863,616 original samples · 19,999.94 samples/s · 0.000–643.183 s in source recording

Unprocessed acceleration. Each vertical stroke is the exact raw minimum-to-maximum range in one display bin; no samples are averaged or filtered.

Raw chirp measurement — tempTvalm2 — run 1 (HIGH sweep)

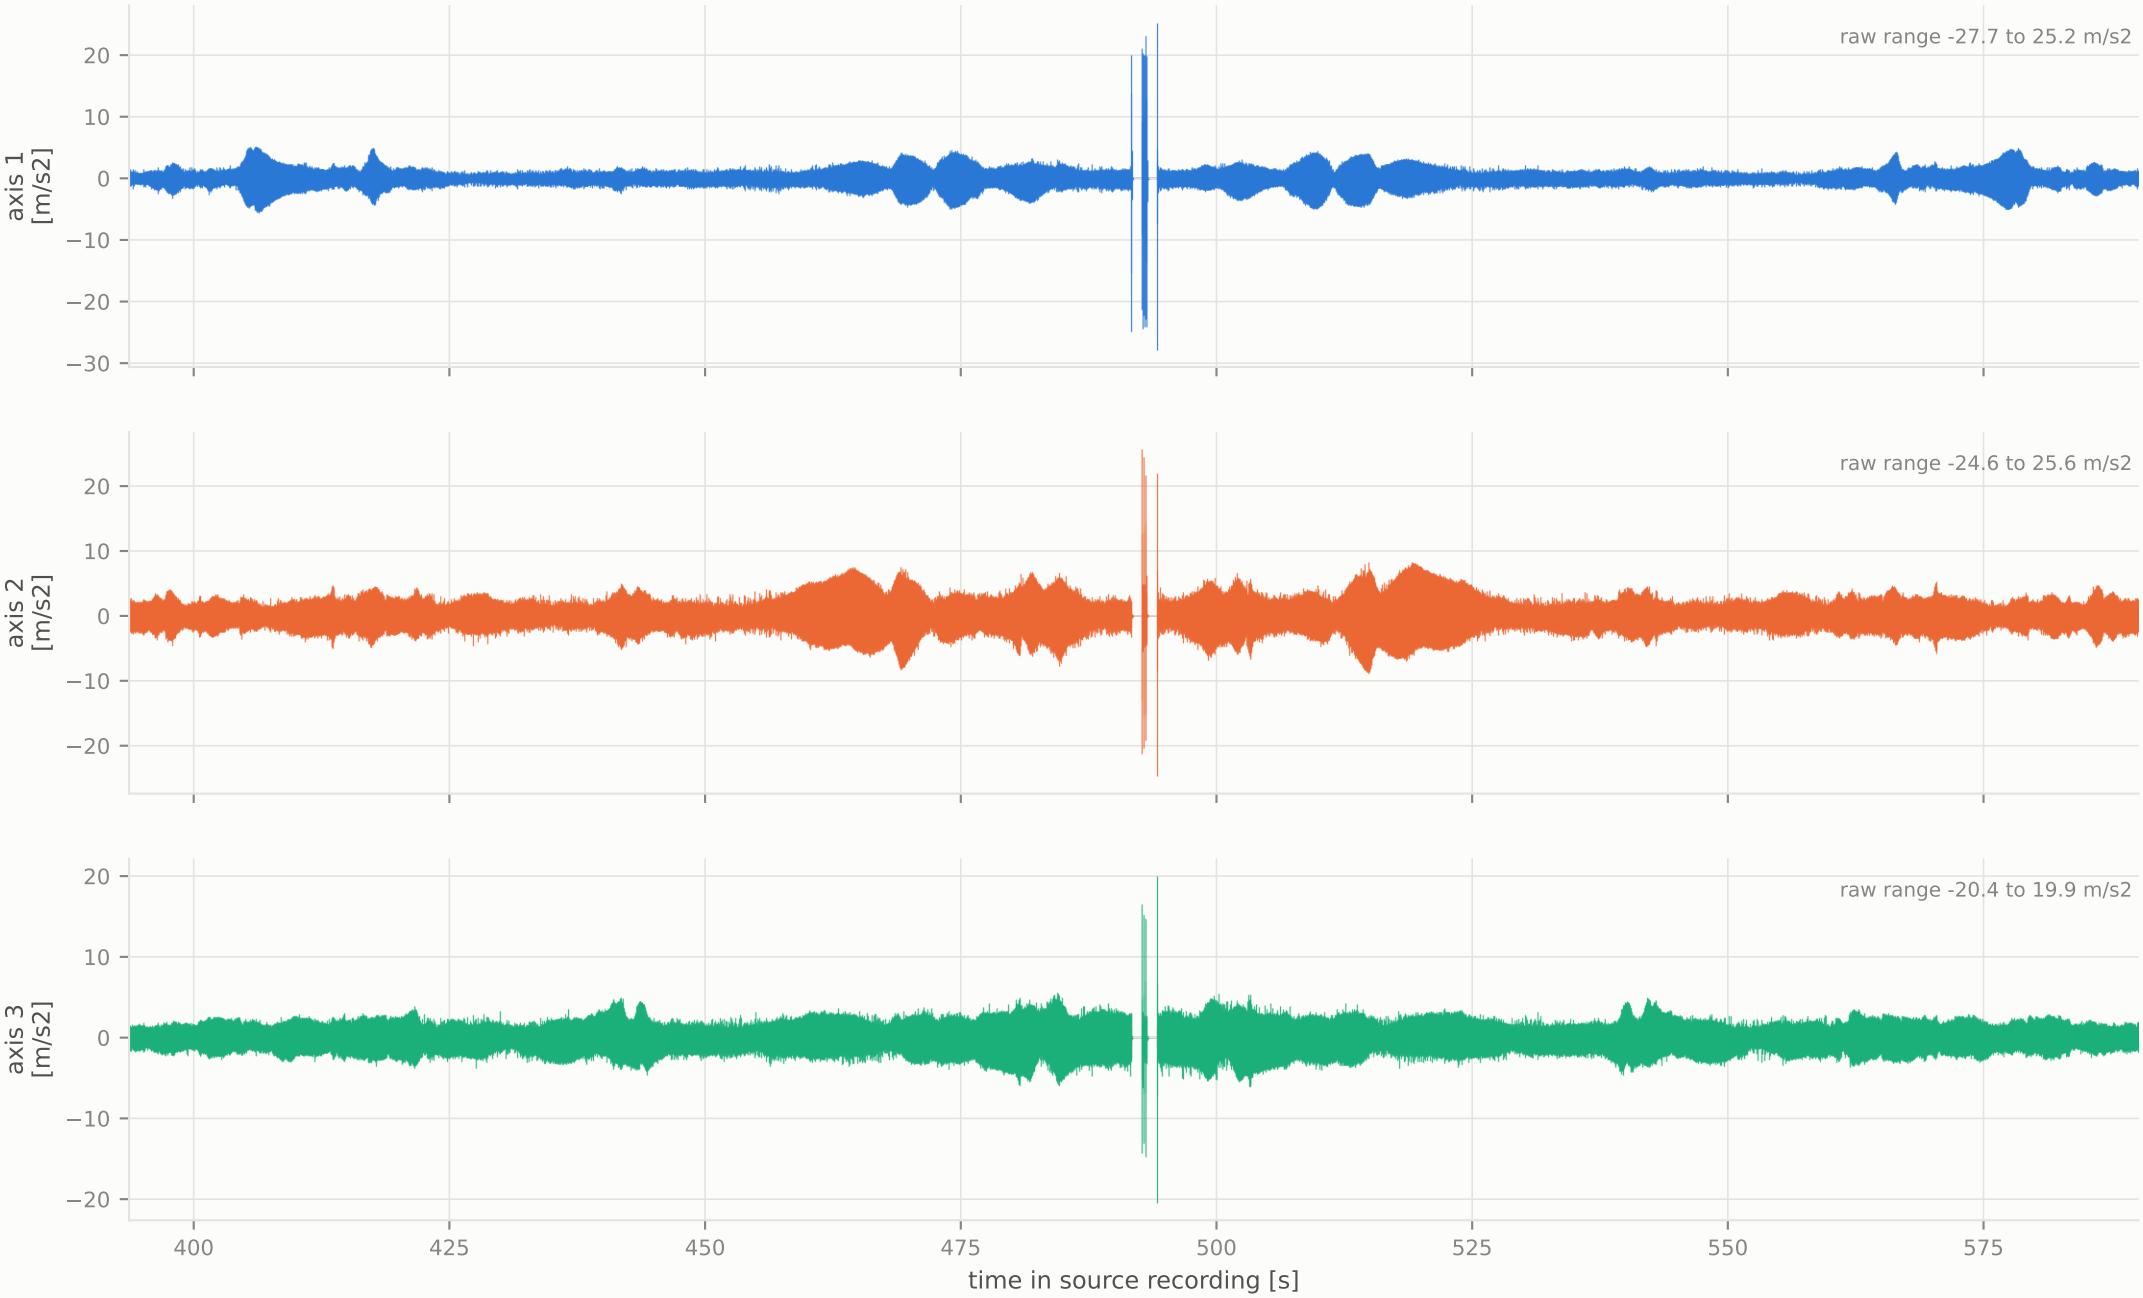

3,929,090 original samples · 19,999.94 samples/s · 57.754–254.209 s in source recording

Unprocessed acceleration. Each vertical stroke is the exact raw minimum-to-maximum range in one display bin; no samples are averaged or filtered.

Raw chirp measurement — tempTvalm2 — run 2 (HIGH sweep)

3,929,089 original samples · 19,999.94 samples/s · 393.678–590.133 s in source recording

Unprocessed acceleration. Each vertical stroke is the exact raw minimum-to-maximum range in one display bin; no samples are averaged or filtered.
